

#### Overview

Place of Origin: Jiangsu, China

Model Number: 1.499

Lenses Color:

Vision Effect:

Corridor:

D28

Brand Name:

Certificate:

Lenses Material:

Clear, Clear

Flat Top

D28

kingway

CE/ISO

CR39

Coating: UC,HC,HMC

Diameter: 70mm

Whatsapp, Skepe, Wechat, Email

# Packaging & Delivery

Selling Units: Pairs

Single package size: 50X45X45 cm Single gross weight: About 22kgs

Package Type: Inner: envelops;Outer: Carton; export standard or upon your design

Lead Time: Quantity(Pairs) 1 - 3000prs, 10days

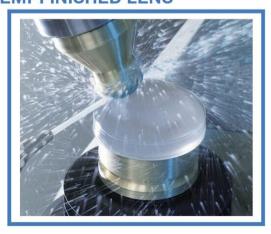

Quantity(Pairs) > 5000prs, To be negotiated

## Semi Finished White 1.499 Index Flat Top Bifocal Lenses UC

| Refractive index | Corridor Length | Coating    | Abbe Value                           |
|------------------|-----------------|------------|--------------------------------------|
| 1.499            | D25             | UC,HC, HMC | 57                                   |
| Specific Gravity | Transmission    | Monomer    | Power Range                          |
| 1.32             | > 97%           | CR39       | SPH: 0.00~+-3.00<br>ADD: +1.00~+3.00 |

#### Features.

#### **SEMI-FINISHED LENS**

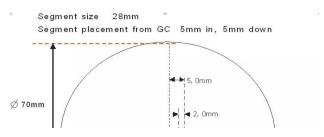

1) The most popular fused bifocal today has a D-shaped near segment rotated 90 degrees so that the flat part of the "D" is facing up. For this reason, D-seg bifocals also are called "flat-top" (FT) or "straight-top" (ST) bifocals.

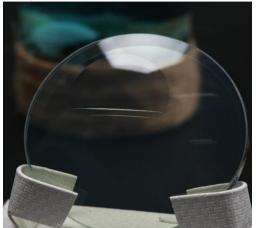

# What's the importance of a good semi-finished lens to RX production?..

- a. High qualified rate in power accuracy and stability
- b. High qualified rate in cosmetics quality
- c. High optical features
- d. Good tinting effects and hard-coating/AR coating results
- e. Realize the maximum production capacity
- f. Punctual delivery

Not just superficial quality, semi-finished lenses are more focus on the internal quality, such as precise and stable parameters, especially for the popular freeform

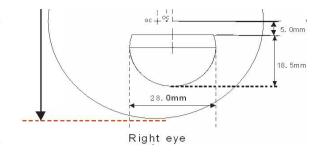

2) This is a D segment bifocal lens. It has the benefit that the optical centre of the near vision part of the lens i.e. the part of the reading area which gives the very best vision, is situated at the top of the reading portion. Also the widest part of the reading area is just below the dividing line, and is the part of the lens the wearer would use.

# AR Coating.

- --HC(hard coating): To protect the uncoated lenses from scratch resistance
- --HMC(hard multi coated/AR coating): To protect the lens effectively from reflection, enhance functional and charity of your vision
- --SHMC(super hydrophobic coating): To make the lens waterproof, antistatic, anti slip and oil resistance.

## The Advantages Of Flat Top Lenses.

- 1) This is a very convenient type of lens that allows the wearer to focus on objects both at close range and far range through a single lens.
- 2)This type of lens is designed to enable viewing of objects in the distance, at close range and in the intermediate distance with corresponding changes in power for each distance.
